---

A Software Developer with previous experience in implementing creative business solutions. Using those creative solutions coupled with my experience as a Software Developer, I bring a unique perspective of looking at both sides of the business unit. My drive for creating customer-focused solutions ignited my transition into software development. My goal is to continuously increase my technical knowledge and strive to contribute to challenging software projects that can aid in all facets of business strategies and everyday life functions.

Development Projects

GoGreen
GoGreen is a full stack web application for users to create lawn service requests, post reviews on the work done by the employer "GoGreen" and upload images of before and after the job has been completed. Technologies implemented include Spring Boot for the main application, Thymeleaf for HTML views, MySQL for back-end storage, jQuery for Javascript utility.

Weather Application
A weather application that renders the five-day forecast for a designated area. Utilizes the OpenWeatherMap API and Mapbox API to dynamically update the forecast and map when a location is selected. Project created using HTML, CSS, JavaScript, jQuery, and Bootstrap.

Movie Application
Used JavaScript and Fetch API requests to allow users to search, add, and delete movie information by name and category in OMDb API.

Adlister
A full stack web page using MVC design pattern with JSP's, MySQL, Servlets, JavaBeans and Maven dependencies to create a full-stack Java application which allows users to post Ads with full CRUD functionality.

Professional Experience

Bluegreen Vacations - San Antonio, TX
Sales and Marketing Representative / Nov 2019 - Feb 2020
- This position in Sales and Marketing required that I spoke with individuals face to face and offered them a raffle on the premise that they fill a Preview of our exclusive vacation club.
